

## Pre-shipment Inspection

Many of your China purchases arrive in your warehouse with unexpected problems. When you opened your container shipment you find products which you never ordered, products which were badly stacked and damaged, or products which do not conform with your purchase order specifications. You then have to negotiate for product returns, do rework or recall products from your customers. Your problems begin at your source of buying. **WE CAN PREVENT THESE PROBLEMS FROM ARRIVING AT YOUR DOORSTEP.**

InspectChina provides you with quality control services in China through delivery inspection. Our trained inspectors do a product inspection to ensure conformance and compliance to your purchase requirements. We do quality control inspection of the final product with functions and usability tests. We enforce material, safety and reliability specifications conformance. We inspect the cosmetics and packaging conformance to customer marketing requirements. We do random inspection of box lots and finished lots. Finally we inspect the proper stacking and stuffing of the products into the containers, witness the sealing of the container locks and ensure that the supplier and logistics company have met CTPAT requirements.
